

RODI's Quality, Environment and Safety Policy

On its manufacturing activities of stainless steel kitchen sinks, raw, painted and anodized aluminium rims and wheels and due accessories, RODI is aware that only with a strong investment on the quality of its products, the well-being of its collaborators and the preservation of the environment, will it be possible to contribute for the sustainable development of the region where it's located and for a continuous improvement on the satisfaction of all interested parts.

Hence, this Quality, Environment and Safety policy is based on the following principles:

- Administration:** Taking on a commitment of complying with all the legal regulation and normative requirements applicable to its products, processes and other requirements the company may subscribe, concerning its dangers for OH&S and significant environmental aspects and of continuous improvement on the QES management System efficacy.
- Collaborators:** Promoting the participation of all collaborators, assuring awareness of a safe work on the prevention of health harms and on sustainable environment.
- Client:** Assessing the needs and expectations of all clients, aiming for their satisfaction and loyalty.
- Suppliers:** Promoting the involvement of suppliers, making them aware of the importance of good safety and environmental practices.
- Society:** Making available information on the Significant Environmental Aspects and preventing pollution through a permanent commitment with the waste and gaseous emissions reduction/valorization.
